Accent the spring with some of these gaily flowered bulbs. Every garden has some place for bulbs, a clump of taller ones here and there in front of shrubs to brighten their flowerless season; low growing bulbs at the edge of borders; groups scattered in the perennial beds for early color; a bed or border of bulbs alone; or planted in a natural manner under trees—all these are possibilities.

For complete information about preparation of soil, location for planting, fertilization and care after planting read our booklet "**When, Where and How to Plant.**" It's yours for the asking.
